NICK SOLTAU

Frontend Developer
linkedin.com/in/nicholas-soltau-075798376 | github.com/NickSoltau | 760-315-1733 | nick.soltau@gmail.com | Bryan, OH

Frontend developer building toward a junior role through hands-on independent project work and an intensive coding bootcamp (Frontend Simplified, completing October 2026). Designed, built, and deployed full-stack applications on my own — including a booking and payments app with Stripe, Supabase, and automated email — using React, Next.js, TypeScript, and Tailwind CSS. Comfortable picking up new tools quickly and shipping working software end-to-end, using AI-assisted workflows like Claude Code to move fast without cutting corners on quality.

Professional Experience

Self-Employed — Bryan, OH (Remote) | 2026 – Present
Independent Web Developer

- Founded and built CraftDesk, a booking and payments platform for small businesses (see Projects); took it to market via direct outreach, later repurposed as a portfolio piece
- Building CornfedBucks, a content and affiliate site for Midwest whitetail hunters, since July 2026, using Claude Code and AI-assisted workflows to plan, build, and publish independently
- Delivered landing pages and web development work for small-business clients end-to-end

Skinstric AI — Remote | August 2026
Frontend Development Intern (Virtual Internship)

- Rebuilt landing page hover interactions and micro-animations for a Next.js/Tailwind CSS v4 app, using Claude Code alongside hand-written CSS and JavaScript
- Improved responsive layout across multiple screens to match Figma specs and an existing Vercel reference build
- Scoped remaining work on nav hover states and production deployment for handoff at internship's end

Projects (personal)

CraftDesk: Live Demo | GitHub
Booking and deposit-management platform for small service businesses, built and shipped independently

- Engineered a request → approval → payment → status lifecycle using React, Vite, and Tailwind CSS, with Supabase for auth and data
- Integrated Stripe payment links (test mode) and Resend for automated booking and status emails
- Found and fixed a Supabase row-level-security flaw that exposed every booking (documented in the repo README)
- Deployed on Vercel; demoed with a sample shop to walk customers through the full booking journey

summarist: Live Demo | GitHub
Book-summary app for browsing and reading condensed non-fiction titles

- Built with Next.js and TypeScript, using Redux Toolkit to manage global app state
- Implemented Firebase Authentication for user accounts and Stripe (test mode) for premium subscription upgrades

Technical Skills

Programming Languages: JavaScript, TypeScript, HTML, CSS
Frameworks & Libraries: React, Next.js, Astro, Redux Toolkit, Tailwind CSS
Backend & Services: Firebase (Auth), Supabase, Stripe, Resend
Tools & Platforms: Git, GitHub, Vercel, Figma, VS Code, Claude Code

Education

Frontend Simplified — Jan 2026 – Oct 2026 (in progress)
Full-Stack bootcamp — HTML, CSS, JS, React, Next.js; now expanding into Node.js & Express

Associate of Science, Respiratory Therapy — University of Cincinnati — April 2016
Graduated Summa Cum Laude

Bachelor of Arts, Philosophy — California State University, Chico — 2003

Certifications: AWS Certified Cloud Practitioner; Anthropic Claude 101 & Claude Code 101
Prior Career: Registered Respiratory Therapist, Cincinnati Children's, 2018–21; Mechanical Estimator, R J Lanthier Co., 2007–10
Interests: Hunting, fishing, and outdoor content creation
